

Agency Analysis

Quarto

Quarto enables you to weave together content and executable code into a finished document. To learn more about Quarto see <https://quarto.org>.

Running Code

When you click the **Render** button a document will be generated that includes both content and the output of embedded code. You can embed code like this:

```
library(dplyr)
```

Warning: package 'dplyr' was built under R version 4.3.3

Attaching package: 'dplyr'

The following objects are masked from 'package:stats':

```
filter, lag
```

The following objects are masked from 'package:base':

```
intersect, setdiff, setequal, union
```

```
library(tidyr)  
library(lubridate)
```

Warning: package 'lubridate' was built under R version 4.3.3

Attaching package: 'lubridate'

The following objects are masked from 'package:base':

date, intersect, setdiff, union

```
library(fixest) # for fixed effects regression analysis
```

Warning: package 'fixest' was built under R version 4.3.3

```
df <- read.csv("ALL RULES 11_13_2023_to_01_19_2025.csv", stringsAsFactors = FALSE)

# Convert publication_date from dd/mm/yyyy to Date format
df$publication_date <- as.Date(df$publication_date, format = "%m/%d/%Y")
```

You can add options to executable code like this

```
# Create a new variable representing the month (aggregating by month)
df_long <- df_long %>%
  mutate(month = floor_date(publication_date, "month"))
```

```
# Aggregate the data to get a monthly total count of rules per agency
monthly_counts <- df_long %>%
  group_by(agency_names, month) %>%
  summarise(n_rules = n(), .groups = "drop")
```

```
# Define the cutoff for the RD analysis (June 29, 2024)
cutoff <- as.Date("2024-06-29")
```

```
# Since we aggregate by month (with the month representing the first day), we treat months
monthly_counts <- monthly_counts %>%
  mutate(post = if_else(month >= as.Date("2024-07-01"), 1, 0))
```

```
# Create a 'distance' variable: difference in days between the month and the cutoff.
# This variable serves as the running variable in an RD design.
```

```

monthly_counts <- monthly_counts %>%
  mutate(distance = as.numeric(month - cutoff))

# Run the RD analysis using a fixed effects regression with agency and month fixed effects

monthly_counts <- monthly_counts %>% filter(month < as.Date("2025-01-01"))

model <- feols(n_rules ~ post * distance | agency_names, data = monthly_counts)
summary(model)

```

```
